

# Eye Protection Types

## Recommended by CDC for COVID-19

Brief Issue Date: **April 24, 2020**

This interim guidance has been updated based on currently available information from the Centers for Disease Control and Prevention (CDC) recommendations about COVID-19 and the current situation. Industrial hygienists use a well-accepted hierarchy to achieve feasible and effective controls to protect workers from occupational exposures: elimination, substitution, engineering controls, administrative controls, and then, personal protective equipment (PPE). According to CDC, the optimal way to prevent airborne transmission of infections in a healthcare setting is to use a combination of interventions from across the hierarchy of controls, not just PPE alone.

Employers should select appropriate PPE in accordance with OSHA PPE standards (29 CFR 1910 Subpart I). Healthcare Professionals must receive training on and demonstrate an understanding of:

- When to use PPE
- What PPE is necessary
- How to properly don, use, and doff PPE in a manner to prevent self-contamination
- How to properly dispose of or disinfect and maintain PPE
- The limitations of PPE

Any reusable PPE must be properly cleaned, decontaminated, and maintained after and between uses. Facilities should have policies and procedures describing a recommended sequence for safely donning and doffing PPE.

### CDC Recommendations for Eye Protection

CDC recommends that when caring for a patient with known or suspected COVID-19, healthcare professionals should use a respirator or facemask, gown, gloves, and eye protection. Regarding eye protection, CDC recommends as follows:

- Put on eye protection (i.e. goggles or a disposable face shield that covers the front and sides of the face) upon entry to the patient room or care area. Personal eyeglasses and contact lenses are NOT considered adequate eye protection.
- Remove eye protection before leaving the patient room or care area.
- Reusable eye protection (e.g. goggles) must be cleaned and disinfected according to manufacturer's reprocessing instructions prior to re-use. Disposable eye protection should be discarded after use.

### Types of Eye Protection

#### Goggles

Protective glasses set in a flexible frame (as of rubber or plastic) that fits snugly against the face. Goggles provide protection against impact and splashing.

#### Visors/Face Shields

Visors shield the front and sides of the face, providing protection against impact and splashing. They attach to headgear or frames.

#### Headgear

Headgear can be used for face protection when head protection is not required. The general purpose headgear is designed and approved for use in combination with protective visors.

#### Frames

For use in conjunction with hard hat and visors.

Various Forms of Eye Protection Provided by MSA Safety

Eye Protection Type	Goggles	Headgear	Visors	V-Gard® Frames

## Please Note

Personal protective equipment (PPE) provides limited protection and may help to reduce exposure to biological agents and the risk of viral infection but **IMPORTANTLY IT DOES NOT ELIMINATE** the risk of exposure, infection, illness, or death, including with respect to SARS-CoV-2/COVID-19. MSA relies on the expertise and recommendations of CDC, ECDC, and other cited authorities, and MSA does not warrant the efficacy of any of its PPE products, or of the information or products in this Brief, in preventing the spread and/or contraction of coronaviruses. It is your responsibility to determine what PPE is suitable for your intended use and consistent with guidelines from your employer and the relevant health authorities. MSA disclaims liability for any loss or damage arising from any information contained herein, whether direct, indirect, special, incidental or consequential, regardless of the legal or equitable theory asserted, including warranty, contract, negligence or strict liability.

### The situation with COVID-19 is rapidly evolving. Organizations like the CDC are providing updated information and guidance as it becomes available.

For the most-up-to date information on COVID-19, you should regularly consult guidance being published by national and international organizations, such as the CDC, the National Institutes of Health (NIH), the World Health Organization (WHO), the European Centre for Disease Prevention and Control (ECDC), and/or your local health authority. Guidance on COVID-19, including information on actions needed to prevent, control, and manage contact with the virus, is available at the following websites:
